

# Grade 7 Math Assessment Practice

## Patterns and Relations

1

$$y = x + 4$$

Which statement about this equation is true?

- A the value of  $x$  is ~~4 times~~ the value of  $y$
- B the value of  $y$  is ~~4 times~~ the value of  $x$
- C The value of  $y$  is 4 more than the value of  $x$  ✓
- D the value of  $x$  is 4 more than the value of  $y$  ✗

- 2 Mrs Monkeybrains had 3 bananas left at home. She bought two more bunches of bananas and now she has 15 bananas. Which equation represents this situation?

A  $2x + 3 = 15$

~~B  $2x = 18$~~

~~C  $(x + 2) + 3 = 15$~~

~~D  $2x = 15$~~

3 Use the pattern to identify the equation that relates the number of squares and stars.

A squares = stars + 1

B squares = stars + 3

C stars = (2 x squares) - 2

**D squares = (2 x stars) + 2**

1 4 + 2  
 2 6  
 3 8  
 2S + 2

1, 4

2, 6

3, 8

4 Larry's Lawn Care Service charges \$30 to meet with you and discuss your lawn care needs, and \$20 per hour when they work on your lawn. Which expression best describes the cost of having Larry take care of your lawn?

A  $50x$

B  $50 + 20x$

C  $30 + 20x$

D  $10x$

5 Which expression has the greater value when  $p = 8$ ?

A  $3p - p$       $3(8) - 8 = 16$

B  $8 + 2p$       $8 + 2(8) = 24$

C  $p + 17$       $8 + 17 = 25$

D  $3p$       $3(8) = 24$

6 Which equation is equivalent to the one shown?

A  $3x - 5 = -11$

B  $3x + 5 = 11$

C  $3x = -14$

D  $3x + 3 = 14$

$x =$ <span style="display: inline-block; width: 40px; height: 15px; background-color: black; vertical-align: middle;"></span>	$1 =$ <span style="display: inline-block; width: 15px; height: 15px; background-color: black; vertical-align: middle;"></span>
$-x =$ <span style="display: inline-block; width: 40px; height: 15px; border: 1px solid black; vertical-align: middle;"></span>	$-1 =$ <span style="display: inline-block; width: 15px; height: 15px; border: 1px solid black; vertical-align: middle;"></span>

7 Evaluate the expression  $3b + 2$   
when  $b = -4$

A 14

B 10

C -14

D -10

$$\begin{aligned} & 3b + 2 \\ & = 3(-4) + 2 \\ & = -12 + 2 \\ & = -10 \end{aligned}$$

8 Lara is building triangles using popsicle sticks. She says "the number of Popsicle sticks I use is double the number of triangles I make plus one". Based on Lara's statement, if Lara uses 137 Popsicle sticks, how many triangles can she make?

A 305

B 45

C 68

D 136

$P = \text{popsicle sticks}$

$t = \text{triangles}$

$$2t + 1 = P$$

$$2t + 1 = 137$$

$$2t + 1 - 1 = 137 - 1$$

$$2t = 136$$

$$\frac{2t}{2} = \frac{136}{2}$$

$$t = 68$$

9 What is the mass of a  ?

$$8\text{kg} - 4\text{kg} = 4\text{kg for stars.}$$

2 stars so each is 2kg

The table shows the relationship between the number of people going to the movies and the cost to buy tickets.

number of people (n)	1	2	3	4
Cost of tickets (c)	6.99	13.98	20.97	27.96

Write an equation to show how cost (c) is related to the number of people (n).  $6.99n = c$

Use your equation to find out how many people went to the movie if it cost \$76.89.

$$6.99n = 76.89$$

$$\frac{6.99n}{6.99} = \frac{76.89}{6.99}$$

$$n = 11$$

11 people went to the movie.
